

Download Broadband Satellite Communications For Internet Access

Satellite Internet access is Internet access provided through communications satellites. Modern consumer grade satellite Internet service is typically provided to individual users through geostationary satellites that can offer relatively high data speeds, with newer satellites using K u band to achieve downstream data speeds up to 506 Mbit/s. This bill would enact the California Internet Consumer Protection and Net Neutrality Act of 2018. This act would prohibit fixed and mobile Internet service providers, as defined, that provide broadband Internet access service, as defined, from engaging in specified actions concerning the treatment of Internet traffic. Since 1999, IP Access has been focused on one mission: delivering reliable connectivity to any location. Leveraging our experience building the nation's largest satellite network for emergency responders, IP Access is uniquely positioned to offer disaster-proof solutions to a wide range of customers. What Is broadband? Broadband or high-speed Internet access allows users to access the Internet and Internet-related services at significantly higher speeds than those available through "dial-up" services.
