

Download How To Manually Restart Macbook Pro

If you are using a MacBook Pro, iBook, or PowerBook laptop, you may need to hold down the "Eject" key for up to 3 additional seconds for your laptop to recognize the "Control" and "Eject" keystroke command. If your Mac desktop or Mac laptop is acting sluggish or programs are failing to run, you need to know how to restart your Mac computer. Restarting or rebooting your Mac essentially clears your computer's memory and starts it up fresh. [How to boot MBP ... How to: Two solutions for the MacBook Pro White/Gray Logo Screen of Death.](#) [2014 AppleCare Expires..](#) For the older MacBook and MacBook Pro models which carry an eject key and a SuperDrive, the Power button is located on the upper right corner of the open Mac. The procedure is otherwise the same as above.
