

Download Make Your Scanner A Great Design And Production Tool

What makes a good scanner for art and design? First up, put away any notions of a bulky beast pulled straight out of your 9-to-5 office nightmare. A good scanner for artists and designers will be the stand-alone desktop sort, preferably a flatbed type with a lid you can press down on your documents (as below). Credit: iStock

Depending on if you go for one of the older models or the latest, the price can vary between \$100 and around \$200 to completely create the 3D scanner. Overall, it's a really cool kit and thesis which you can make at home. If you want to create your own FabScan, you can download the parts for each version here. Not all scanners are created equal. Like any other tool, scanners are designed for specific jobs, so what may be best in class for one situation could be a lagging runner-up in another. Recognizing this, considering your needs, and searching for a scanner that prioritizes those needs is a great way to find the best scanner for your office.
