

Download Nonindigenous Fresh Water Organisms: Vectors, Biology, And Impacts

An invasive species might be able to use resources that were previously unavailable to native species, such as deep water sources accessed by a long taproot, or an ability to live on previously uninhabited soil types. About DAISIE. This website was developed as part of the Delivering Alien Invasive Species In Europe (DAISIE) project funded by the sixth framework programme of the European Commission (Contract Number: SSPI-CT-2003-511202). We review the management options for invasive alien aquatic plants. • Biological, chemical and mechanical control options are discussed. • A diagram illustrates relationships between ecosystem, goals, outcomes and tools.
